**Re: Voluntary Methanol Source Testing**

Dear Roylene and Zach:

Recently, Clearwater completed testing of process gases, as required by U.S. EPA (EPA) in its information request dated July 19, 2013. The enclosed source test plan from Horizon Engineering notifies EPA of testing scheduled on June 24-25, 2014 at the Clearwater Paper Corporation, Lewiston Mill (Clearwater) to evaluate methanol emissions, if any, from the cyclone located above each storage vessel for the M&D Digesters No. 1 and No. 2 (referred to as the "Kone bins"). Testing the Kone bin exhaust for methanol was not required by U.S. EPA but Clearwater Paper believes evaluating the emissions from the Kone bins is a paramount consideration to resolve issues under discussion with EPA and we are proactively taking this action.

We invite EPA's review of this test plan and please offer any comments to Margery Heffernan Project Coordinator with Horizon Engineering at 503-255-5050.

Sincerely,

Marv Lewallen  
Vice President – Environmental, Energy & Sustainability
